

Curvature evidence

$$S_{\text{int}}^{\sigma}(i, j)$$

Strong dark-ridge curvature
at *both* endpoints

Elongation

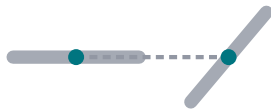

$$S_{\text{shape}}^{\sigma}(i, j)$$

Elongated structures
rather than round blobs

Alignment

$$S_{\text{align}}^{\sigma}(i, j)$$

Compatible local directions
 $\theta^{\sigma}(x_i)$ and $\theta^{\sigma}(x_j)$

 stronger similarity

 down-weighted connection
