

Classical Frangi cues (paired here)

Intensity / contrast

$$S_{\text{int}}^{\sigma}(i, j)$$

Curvature strength
at *both* endpoints

Shape

$$S_{\text{shape}}^{\sigma}(i, j)$$

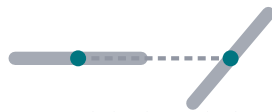

Elongated structures
rather than round blobs

Added by the graph

Alignment

$$S_{\text{align}}^{\sigma}(i, j)$$

Compatible local directions
 $\theta^{\sigma}(x_i)$ and $\theta^{\sigma}(x_j)$

— stronger similarity

----- down-weighted connection
